

Swing Bridge

Feasibility Study

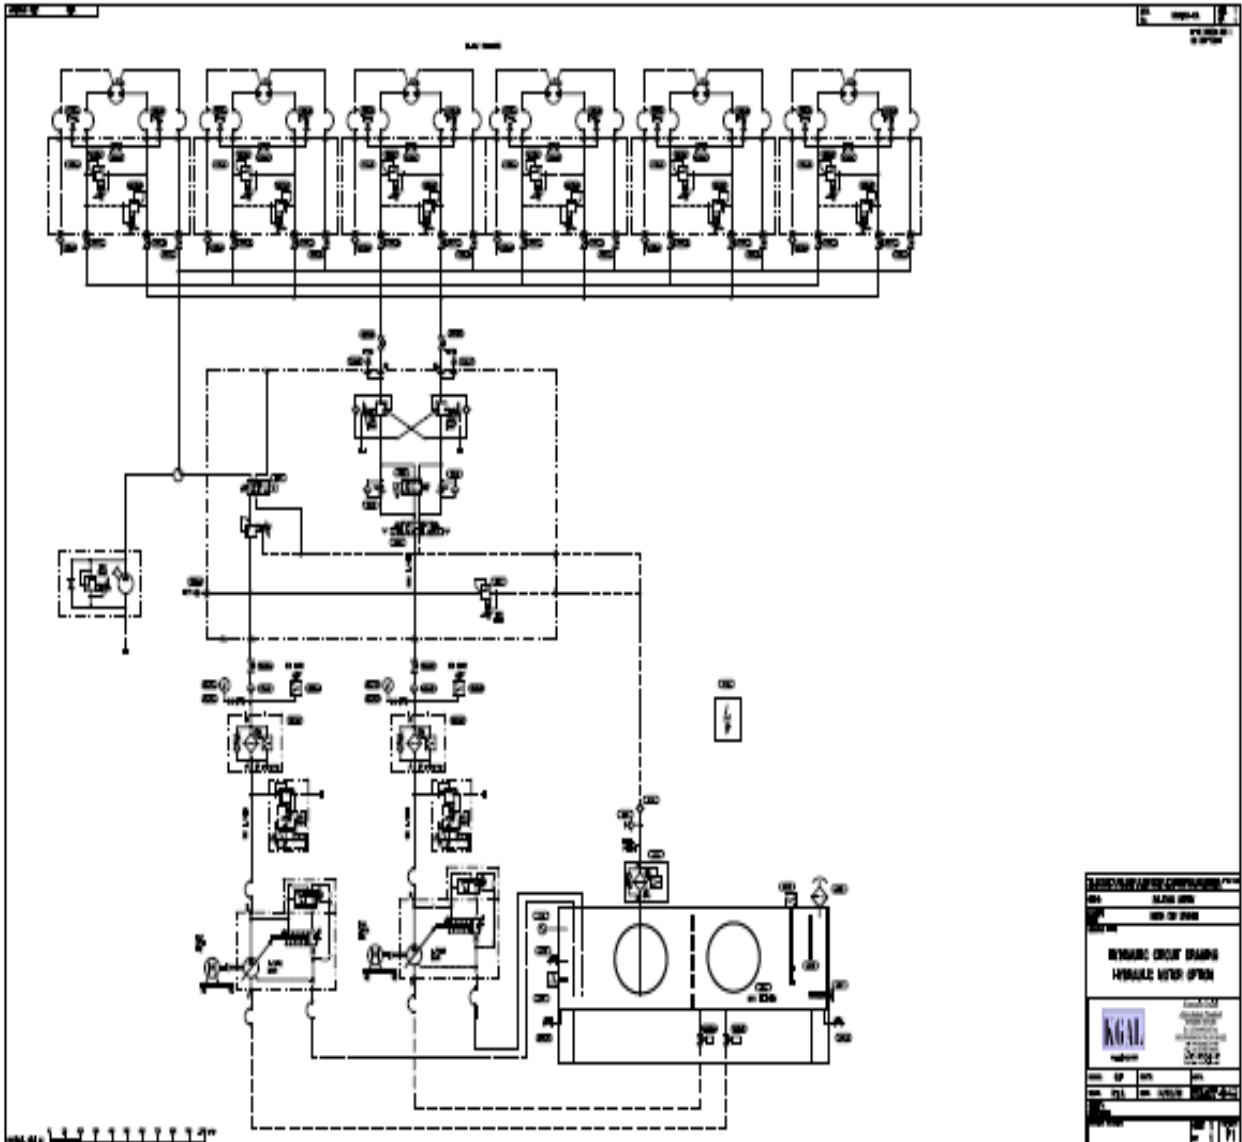

Objectives

- Create a model of the hydraulic drive system of the bridge.
- Simulate various scenario's and verify the correct operation of the bridge

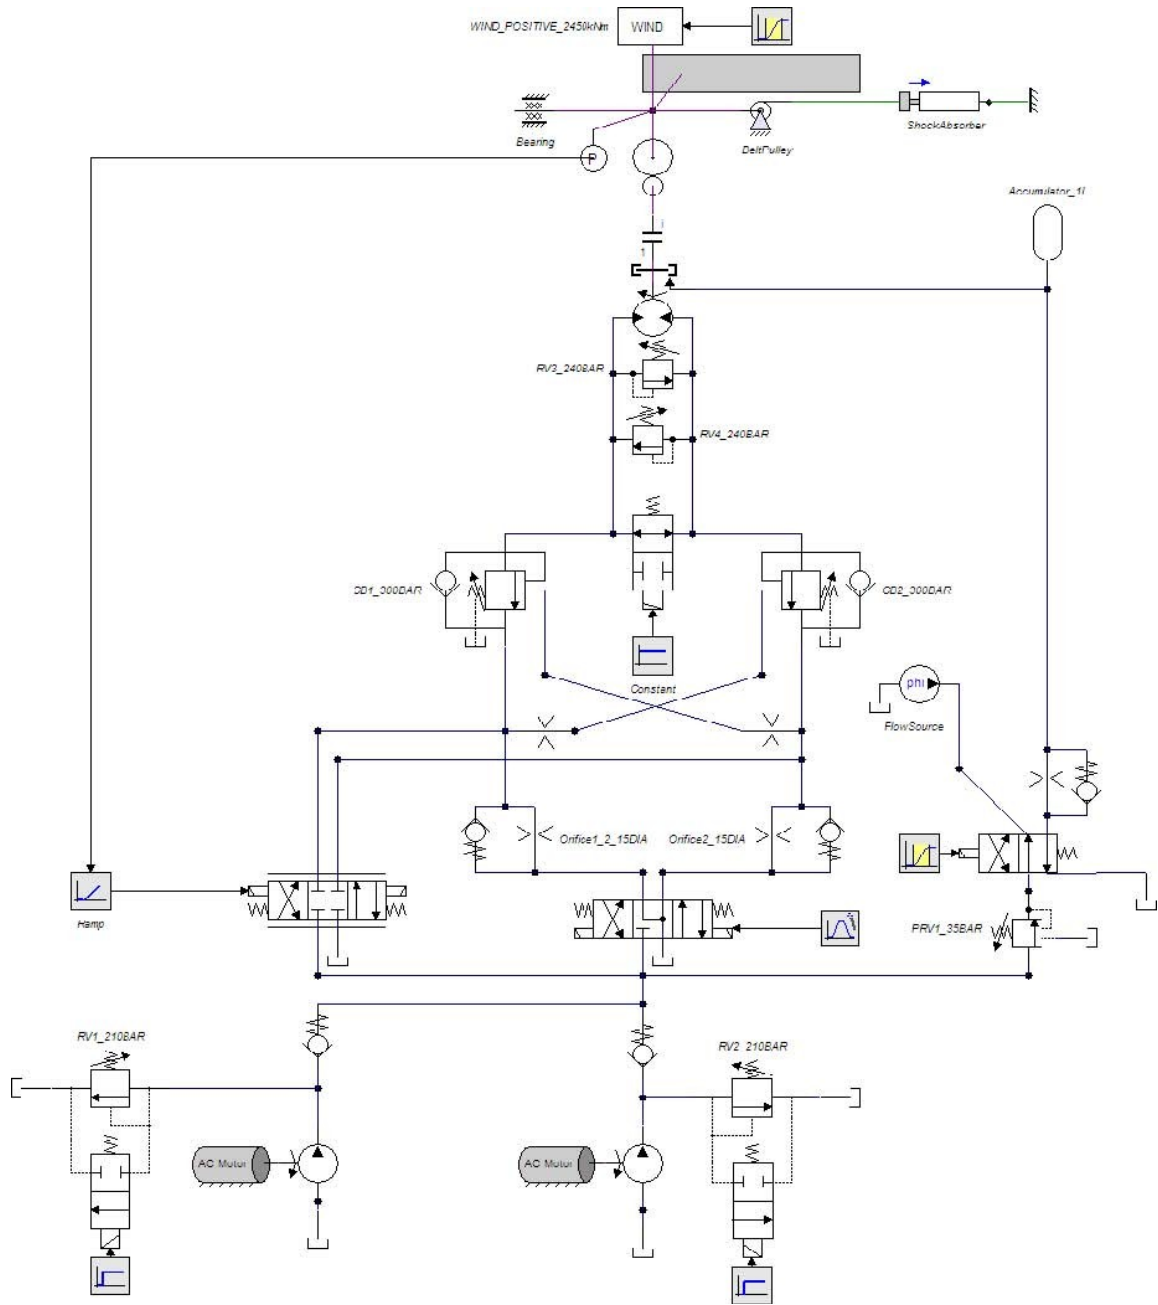

The Power in Modeling

Hydraulic Circuit

The Power in Modeling

Model

The Power in Modeling

Simulation

Results

- The hydraulic system is fit for its job.
- The bridge will be able to operate at severe wind load.
- More dampers at the end tip of the bridge are required.
